ICEBERG

GLASS IN MOTION

Designed by **GARRET CORD WERNER ARCHITECTS & INTERIOR DESIGNERS**

Iceberg invokes a fresh, watery, floating context of glass islands streaming aimlessly within an invisible boundary.

Iceberg nuggets, with chiselled edges, are solidly formed then melted within a sea of clear glass formations. The intricate production methods create panels of vivid glass features, where the icebergs appear to move and float as if gently flowing with an ocean current.

This unique, textured glass, is the latest product launch for **NATHAN ALLAN GLASS STUDIOS**.

Iceberg Glass can be produced in small or large, 1.5" thick textured glass sheets, in Annealed or Safety Laminated versions.
