CONVEX

# PRODUCT INFORMATION

## AWARD WINNING ARCHITECTURAL GLASS

Convex Glass is an extremely unique glass product. Created by Nathan Allan, Convex Glass has a deep 3-Dimensional surface, which is awe inspiring to view, and extremely complex to produce. Using proprietary Free Forming glass procedures, Convex Glass provides a beautiful visual appeal, while also creating a light distortion and shadowing effect. This dual combination creates a level of privacy for our clients, while allowing a high percentage of light to travel through the glass and illuminate the space.

# PROJECT DETAILS

## ISONO AND VASCO RESTAURANT HONG KONG, CHINA

For this Hong Kong restaurant duo, Nathan Allan Glass Studios created a series of ten textured cast glass panels for a walkway façade. The three-dimensional glass acts as a divider between the two spaces, while also creating a sense of openness and fluidity.

These refined glass partitions elegantly distort light to create privacy without sacrificing illumination. Diners can enjoy the beauty and of our sophisticated cast glass from all angles, whether they choose to dine at Isono on the main floor or at Vasco on the upper floor.

World-renowned interior designer **Joyce Wang** beautifully incorporates our Convex Squares cast glass dividers into the design of Isono and Vasco. Wang has elevated dining to another level by layering radiating globes of light with metal and stone finishes, which all blend seamlessly with the stunning 3D texture of our Convex Squares panels to create a retro-futuristic look.
